Figure 4 Chart C Sheet 1 below counts and means for five duration groups

	Not age-standardised					
N	years exposed	Background			Paritutu	
10	1 to 5	1.6			3.2	
15	6 to 10	1.4			3.6	
12	11 to 15	1.5			3.1	

4	16 to 20	1.6			13.8	
11	21 to 25	2.6			14.9	

Below basic outline of the effect of regroupings and falsifications

Below ESR data Paritutu all age subjects for those resident by 1967 and 1968-71 and after 1973 mean increase over NZ 1997

*note 1408 has evidenced unrecorded study area residence 1961-63 and then 6 years possible farm exposure in South Taranaki.

Below ESR 2005 reported regrouped and falsified increases (uses estimated 2004 background) with adult 1960s isolated as long-term
