

Several investigations of the IWD liquid waste Paritutu open drain outfall were noted in August 1967 and apparently destroyed before 1989

27.4.1989 TDHB reply to TVNZ request for 1965 to 1970 files on IWD – pre 1974 records destroyed

Prior to this, such premises were classified as "chemical works" and were licensed under a now repealed section of the Health Act (Section 113-16) which covered the subject of air pollution. Unfortunately, all records of this period have been destroyed and we have no record of, or knowledge of any details relating to your query.

2010 TDHB reply to request for closed file register recording the 'inadvertently' destroyed IWD files

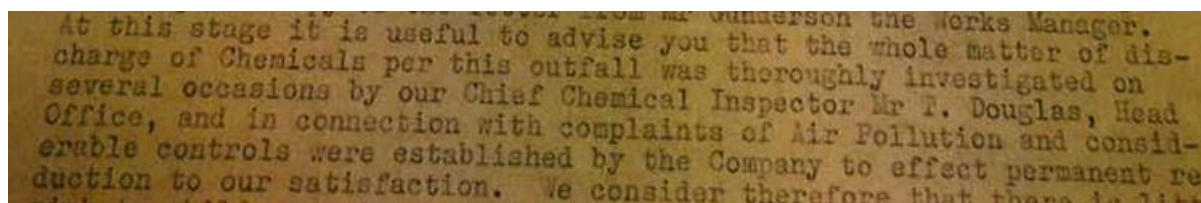

3. *Request copies of the TDHB Health Protection and/or relevant closed file register recording or listing the 'important files' regarding dioxins destroyed in the early 2000s.*

This information is not available as the closed file register was destroyed in the early 2000's.

So files on two 1960s DoH investigations of the Paritutu outfall were destroyed by 1989 and in a 2nd session of IWD file destruction in the early 2000s the record of destroyed files was also destroyed.

17 August 1967 NZ Department of Health to the Secretary NZ Marine Department

Excerpt cites several investigations of IWD drain – example of files likely destroyed

At this stage it is useful to advise you that the whole matter of discharge of Chemicals per this outfall was thoroughly investigated on several occasions by our Chief Chemical Inspector Mr T. Douglas, Head Office, and in connection with complaints of Air Pollution and considerable controls were established by the Company to effect permanent reduction to our satisfaction. We consider therefore that there is little
